LED LIGHTING

-For the Home

Koloona has experienced a number of LED conversions from Fluorescent tube lighting, downlight, standard bayonet and outdoor lights to LED replacements or LED alternatives. Most light fittings are made so that they can be easily accessed in order to change faulty globes.

The GU 10 LED kit pictured here, replaces standard down lights that use a transformer and low volt halogen lamps.

Koloona's range of LED lighting are compatible with dimmer switches and existing fittings and can be as easy to replace as changing a light bulb.

No Electrician required.

Koloona will release it's new range of bayonet LED replacements lighting later on in 2011.

- For Outdoor Lighting

Koloona stock a number of outdoor flood light LED replacement globes and spot light LEDs.

Fitting into E27, PAR30 / 38 Koloona's LED spotlight and flood light replacement globes fit various existing outdoor lighting fixtures.

LEDs emit more light per watt than standard incandescent light globes and their efficiency is not affected by shape and size unlike fluorescent lighting.

LEDs are ideal for uses where they are subject to frequent on-off cycling, unlike fluorescent lamps and tubes that fail faster when cycled often.

Koloona's range of LED lighting for the home or the office come in two choices of colour temperatures;

'Cool' white would normally be used where a specific task requiring a clearer brightness is needed, such as the; Kitchen, Study, Bathroom, etc.

'Warm' white LEDs are most commonly used for an ambient softer feel, for areas like; Hallways, Dining rooms, Bedrooms etc. The 'Warm' white resembles the glow of an incandescent globe.

LED lighting in general does not produce UV, therefore LEDs are the best option for outdoor lighting; coupled with the low energy consumption, without UV means that they do not exhibit the attraction to insects that normally frequent your outdoor lighting fixtures.

Koloona can supply a number of adaptors to fit and convert household bayonet fittings (Ba22d) to many other types like; E27, E14, E10 and GU10.
